Pressure Variations in Town of Sweden

Rev. August 22, 2018

The water storage tank in Clarendon has been temporarily taken out of service so that it can be repainted by the Town of Clarendon. While the tank is being painted you may see high or low variations in your water pressure.

With the tank out of service, the pumps that we use to serve our customers in both the Towns of Sweden and Clarendon must meet a wide variation in demands which can cause them to, for short periods of time, produce both higher and lower pressure as they adjust to meet changes in water use.

The Town has informed us that they expect the tank painting work to be complete in early October, after which water pressure should return to normal levels.

If you experience sustained low pressure please call Customer Service (585) 442-7200 or after Business Hours: (585) 442-2009.
